

## **Bacterial Infections**

### **Bacteria-guy**

The defect in neutrophil adhesion results in poor chemotaxis and phagocytosis, causing individuals with this deficiency to suffer from recurrent bacterial infections that are often life-threatening.

## **Non-Pyogenic**

### **Nun Pus-pie**

It is important to note that the infections are non-pyogenic because neutrophils cannot migrate to the site of infection.

## **Delayed Separation of Umbilical Cord**

### **Unseparated Umbilical-cords**

Delayed umbilical cord separation beyond the normal range of 3-45 days can raise suspicion of Leukocyte adhesion deficiency because this is common in infants with LAD.
